5E2, Street 164, Sangkat Phsar O&39;Russey 3, 12256, Phnom Penh,

About Me

I am a recent Computer Science graduate with a strong interest in software and web development. I enjoy working with front-end and back-end technologies, including Laravel, Django, Next.js, and cloud computing. I am also interested in game development and IoT. I am passionate about learning new technologies, building practical projects, and growing as a software developer.

Skills

- HTML CSS Javascript
- Laravel Framework
- Python Django
- Cloud Hosting Digital Ocean
- Gogot Engine
- Java Spring Boot

Language

- Khmer: Native
- English: Good

Work Experience

Member Radice Center - Paragon International University (March 2025 - March 2026)

Personal Project

Solace - A web-based platform for mental health support & AI assistants.
A full-stack web-based mental health support platform integrating an AI assistant, mood tracking, journaling, and personalized well-being resources using Next.js, Django, and PostgreSQL.

DND - Dungeon Survival (Godot 4, GDScript)
Developed a 2D action roguelite game in Godot 4 featuring procedural enemies, multiple game modes, progression, AI behaviors, and combat mechanics using GDScript.

SaaS Dynamic Point and Reward System Architecture
Designed and developed a scalable SaaS rewards system with configurable point earning and redemption features. Implemented transaction history and audit logging for secure and traceable reward management.
